RE: Proposed "Plan of Operations"
State Lands: ML 44866/BSLS; S15, T43S, R15W, SLBM, Washington County

PLAN OF OPERATIONS

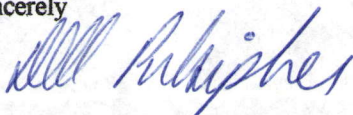

The land located in the area of section 15, which has a drastic change of elevation, has created an environment for the removal of float rock from the surface. Our plan is to do just that. Using existing accesses remove the rock for resale. On the included map, there are some dead end coves. We would like to take one of those coves and use large concrete blocks and cable to block off an area for storage of boulders. This would not affect any other users, because by foot or animal you could get around. The purpose would be to keep others from hauling off the collected rock. (Storage area marked in orange) ^(pink)

There is an area on the lower portion of the cliff that I would like to bring a crane into, (marked in blue) to be able to harvest the float rock. This will necessitate me bringing in approximately 10 yards of soil to make the turn off the road easier and to make it so we do not erode the edge of the asphalt.

Equipment to be used in the removal of stone: Front-end loader with forks, Crane, Flatbeds. In the storage area, removable cement blocks, cable.

I have spoke with Doug Jensen (reclamation specialist) and he has given me the necessary papers and information to comply with his department as well. *Areas in Black existing trails/Roads*

Sincerely

Dell Pulsipher
